Roller Track Design Improvement

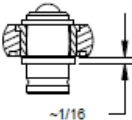

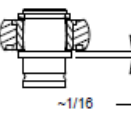

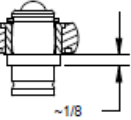

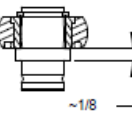

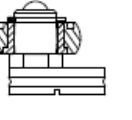

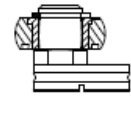

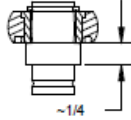

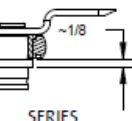

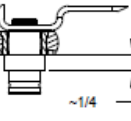

The current LCN track roller tire is a two piece design that requires lubrication. Beginning April 2nd, 2018 a new one-piece design, pictured below, will go into production. This enhancement requires less maintenance and improves performance. In addition, the new one-piece track provides smoother and quieter operation.

Current Design

New Design

This change affects all track roller tires except High Security models and 4030 closers.
